

National Badger Team Contract

Team Meetings

Team meetings will occur regularly on Tuesdays 12:30-onward. The team will have additional meetings as necessary. During team meetings, each member will share with the group what they're working on, any problems they've faced or anticipate, what they've accomplished, and what help they may need from the team moving forward.

Task Handling

Assigning Tasks and Code Review

Tasks will be assigned during weekly meetings. The group will consider each member's strengths, interests, and goals when dividing up work. We will aim to give each member the same amount of work. We will set internal deadlines at meetings and adjust these deadlines if a team member communicates ahead of time with the rest of the team the reasons that an original deadline can't be reasonably met.

During each meeting, to maintain quality of the project, we will assign other members to review code.

Not Meeting Deadlines

If a team member misses a deadline without reasonable explanation/communication or if a team member misses multiple deadlines, even with reasonable explanation, then the rest of the team will go to the TA or professor for guidance and to give feedback.

Personal Goals

Karleigh's personal goals for this project are to gain project experience and learn to apply the concepts and technologies we learned about in class. I hope to get an A on this project, and I will work toward that goal.

Val's personal goals for this project are to further engrain my web design experience and gain experience in project leadership. I am aiming for an A on this project and in this class and will work toward that goal.

Denis' personal goals for this project are to gain teamwork experience and learn about new libraries and technologies. I am aiming to do well enough on this project to get an A- for the class and will work towards that goal.

James's goals are to get an A on this project, but at the bare minimum pass the class. I want to become better at HTML, CSS, and JavaScript frameworks and gain more experience with web design.
